

**PSC Case No. 9483**

**Citizens UB Solar, LLC**

*(Correction to PPRP Exhibit 8 – Revised Final Recommended Conditions)*

**Corrected language for Revised Final Recommended Condition 26**

26. Glare Mitigation – Prior to installation of the solar panels, Citizens UB Solar shall take the following actions to provide an opaque buffer that mitigates glare impacts upon surrounding public roads and properties. The Applicant may add an opaque addition to the Project’s perimeter fencing (such as slats or fabric) to initially comply with this requirement. However, if not sufficient to mitigate glare, the Applicant shall construct a temporary, opaque buffer that may include any combination of additional fencing, landscaping and berms that completely screens Green Valley Road from the sun’s reflections off solar arrays from the time the panels are mounted on supports. The temporary buffer shall be installed within the setback where permanent landscaping has been proposed or required, as described in Recommended Condition 22, and must be maintained until the permanent landscape buffer provides an opaque visual barrier. The temporary buffer shall be in conformance with all applicable State and local laws and regulations.
